3 · Define — Groq

llama-3.3-70b · genus-differentia, 80–120 words

A cell of the nervous system classified as an interneuron, located in the striatum, characterised by its role in the GABA biosynthetic process; expresses GAD1, GAD2 and PVALB in Homo sapiens.

grounded facts only — the LLM never invents ontology terms

4 · Classify — ELK

places it	neuron → interneuron → this term
verdict	coherent · under its genus · no equivalent
→ NOVEL — safe to mint	
confidence	1.00
