

CellScribe recovers expert-curated Cell Ontology definitions from cell-type names

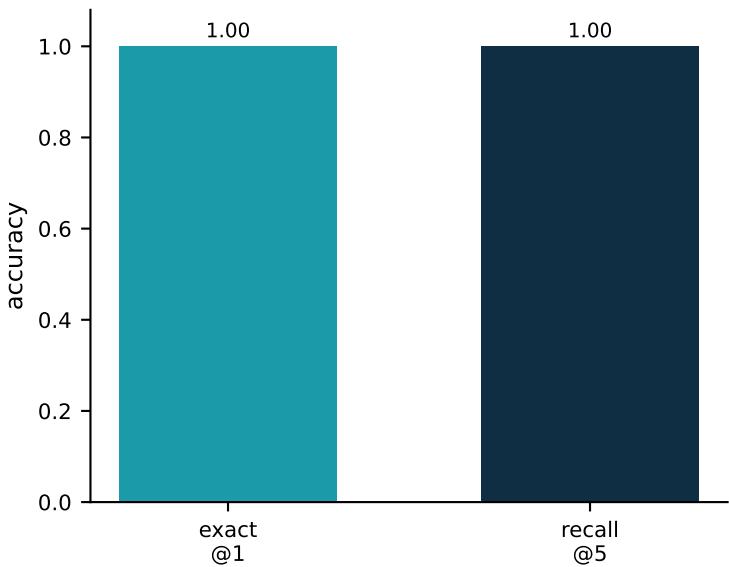

**a**

Term recognition (n=400)

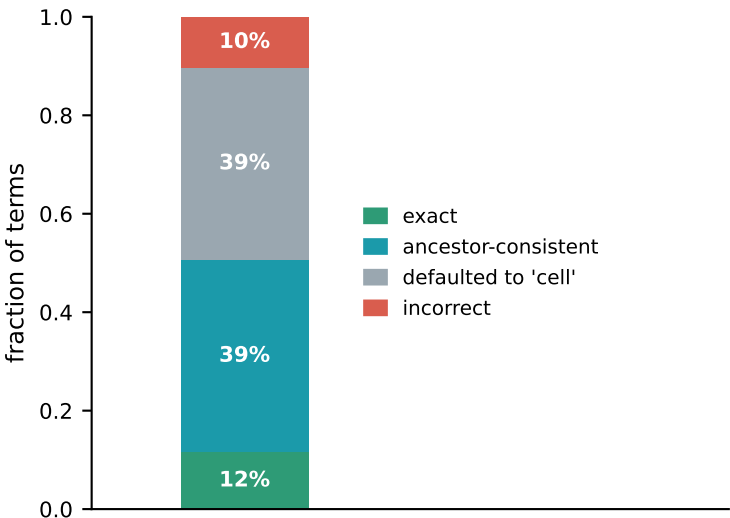

**b**

Anatomical location → Uberon (n=400)

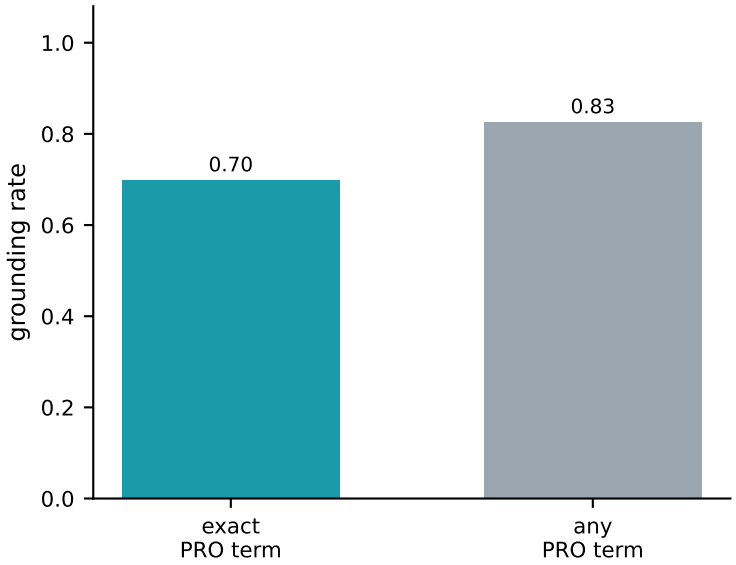

**c**

Genus derivation vs curated is\_a (n=371)

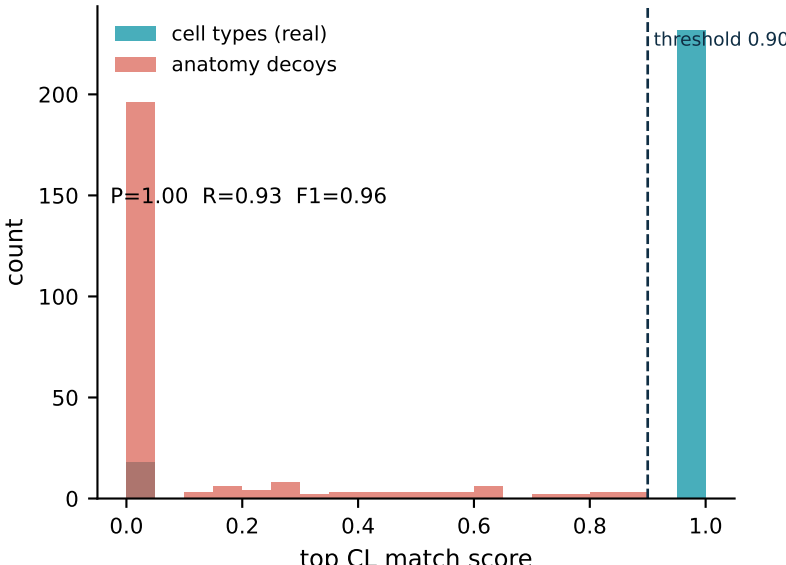

**d**

Surface marker (symbol) → PRO (n=149)

**e**

Existing vs novel discrimination

**f**

Benchmark summary

| Gold standard        | Cell Ontology |
|----------------------|---------------|
| CL terms (labelled)  | <b>3537</b>   |
| logical definition   | <b>1737</b>   |
| part_of Uberon       | <b>882</b>    |
| surface PRO marker   | <b>302</b>    |
| Recognition recall@5 | <b>90.8%</b>  |
| Location exact@1     | <b>100.0%</b> |
| Genus hier.-valid    | <b>50.7%</b>  |
| Discrimination F1    | <b>0.96</b>   |
