

CellScribe recovers expert-curated Cell Ontology definitions from cell-type names

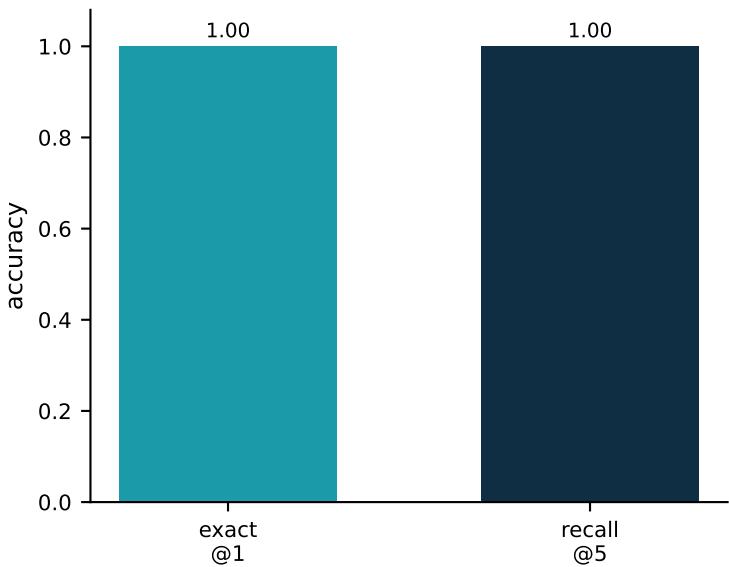

a

Term recognition (n=400)

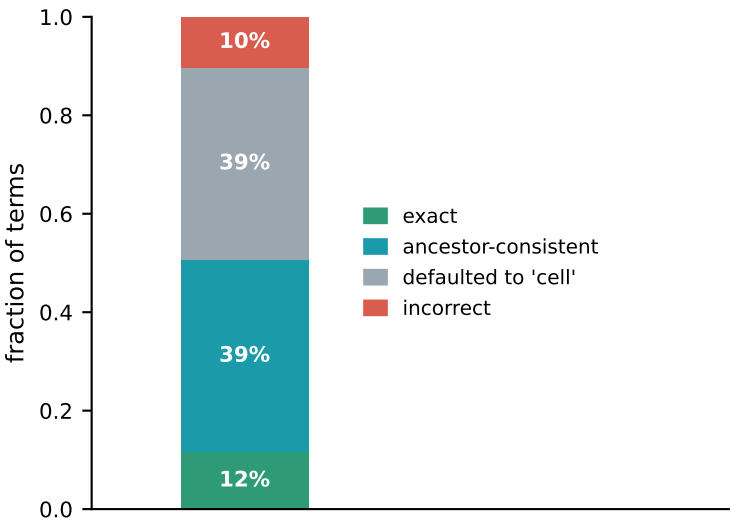

b

Anatomical location → Uberon (n=400)

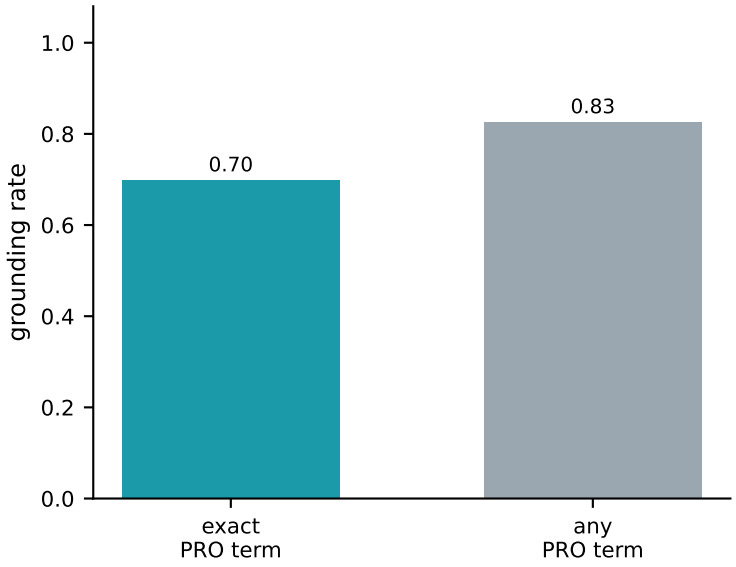

c

Genus derivation vs curated is_a (n=371)

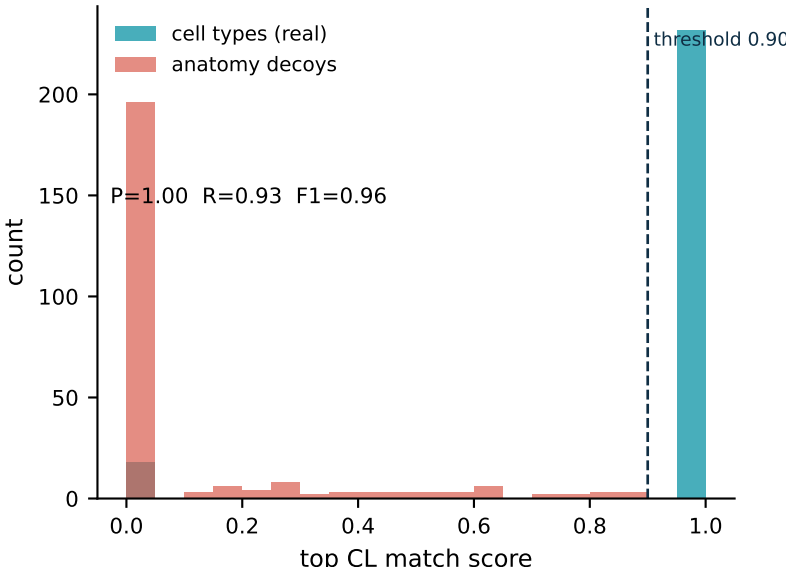

d

Surface marker (symbol) → PRO (n=149)

e

Existing vs novel discrimination

f

Benchmark summary

Gold standard	Cell Ontology
CL terms (labelled)	3537
logical definition	1737
part_of Uberon	882
surface PRO marker	302
Recognition recall@5	90.8%
Location exact@1	100.0%
Genus hier.-valid	50.7%
Discrimination F1	0.96
